WHAT IS RUNNA?

Runna helps goal-oriented runners prepare for races by providing structured and personalized training plans tailored to their current fitness level, race goal and timeline.

WHY IS IT NEEDED?

- Don't know how to structure their training properly
- Train inconsistently without a clear weekly plan
- Risk injury due to overtraining or poor planning
- Motivation drops in the middle of long training programs

Runners need step-by-step guidance tailored to their goal and timeline

HOW DOES IT WORK?

REVENUE MODEL

COMPETITIVE LANDSCAPE ANALYSIS

PRODUCT	POSITIONING	STRENGTH	WEAKNESS	RUNNA OPPORTUNITY
	Social fitness network	Community engagement	No structured coaching	Add social accountability
	Motivational running app	Habit & gamification	Weak race planning	Stronger motivation loops
	Data-driven coaching	Deep performance insights	Device lock-in	Adaptive training intelligence
	Pro coaching platform	Advanced analytics	Complex for casual runners	Simplified advanced insights
	Race training coach	Structured race plans	Weak social + adaptive layer	Add adaptive coaching

MARKET SHARE

INDUSTRIAL SHIFT

- Personalization through AI
- Community-driven engagement
- Data-integrated coaching
- Hybrid offline + online experiences

Runna must evolve beyond static plans to remain competitive

TARGET USER SEGMENTS

Casual Fitness Runners
First-Time Race Runners
Performance-Oriented Runners
Elite / Competitive Runners

Individuals training for their first race who need guidance and confidence to follow a training plan.

WHY?

- Strong product-user fit
- Goal-driven motivation
- Higher plan adherence
- Better willingness to pay
- High retention impact

USER PERSONA

ARJUN MEHTA

24 • Marketing Executive • Bangalore

"I want to complete my first half marathon but need a structured plan"

Running Experience

- Beginner runner
- Limited knowledge of pacing & endurance

Pain Points

- Don't know how to train properly
- Starts fast → burnout

NEHA IYER

34 • Entrepreneur • Chennai

"I need training that fits my busy schedule."

Running Experience

- Intermediate runner
- Completed multiple 5-8K races

Pain Points

- Unpredictable work schedule
- Rigid plans break after missed workouts

USER JOURNEY

WHAT PROBLEM ARE WE SOLVING?

Rigid Training Plans – Most running apps provide fixed plans that fail to adapt to fatigue, recovery, or missed workouts.

- Poor Training Calibration – Runners often misjudge their fitness level, leading to unrealistic pacing and increased injury risk.
- Low Long-Term Adherence – Motivation drops during long training cycles, causing users to abandon training plans before race day.

CONSTRAINTS

- Users have unpredictable schedules
- Running motivation drops after 2–4 weeks
- Training plans must avoid injury risk
- Users have different fitness levels
- Over-complex coaching reduces usability

USER FLOW WITH SOLUTIONS INCLUDED

PAIN POINT	SOLUTION	IMPACT	COMPLEXITY
1 CONTEXT-BLIND TRAINING Plans don't sufficiently adapt to fatigue, weather, illness, or recovery needs.	Context-Aware Adaptive Training • Daily readiness check (fatigue, soreness, sleep) before workouts • Automatically adjust intensity or distance based on readiness • Integrate weather data to suggest treadmill/shorter runs • Offer “light run / recovery run” alternatives when fatigue is high		High
2 INACCURATE SELF-ASSESSMENT Beginners overestimate ability during onboarding, resulting in unrealistic training intensity.	Progressive Ability Calibration • Initial diagnostic run to estimate pace zones • Use early runs (first 2 weeks) to recalibrate training intensity • Provide beginner-safe defaults if user overestimates ability • Periodic reassessment runs to update training zones		Medium
3 LIMITED INJURY PREVENTION Training progression can increase mileage or intensity too quickly, raising injury risk.	Injury Risk Monitoring • Track sudden spikes in mileage or intensity • Warn users when weekly load increases too quickly • Recommend recovery days or cross-training • Include strength and mobility workouts to reduce injury risk		Low-Medium
4 MOTIVATION DECAY Long training cycles lack dynamic engagement systems to sustain motivation.	Gamify and give back Rewards • Run streaks to unlock coupons, free trials of premium features. • Community Challenges: Participate in group distance or consistency challenges with rewards like badges, leaderboard recognition, or gear discounts.		Medium

EXECUTION ROADMAP

BUILDING A LONG-TERM COMPETITIVE ADVANTAGIOUS PRODUCT

NORTH STAR METRICS

RISK - IMPACT - MITIGATION

RISK	IMPACT	MITIGATION
Adaptive plan changes too frequently	User confusion / trust loss	Limit adjustments to weekly intervals
Readiness inputs inaccurate	Poor training calibration	Combine manual inputs with wearable data
Gamification fatigue	Reduced motivation impact	Rotate challenges and seasonal events
Complex onboarding	User drop-off	Progressive onboarding & defaults

TRADE-OFFS
