

Keep the Pro, Keep the Job.

83% of Urban Company's NTV comes from retained users, yet the moment a customer finds a pro they trust, the next job can move to WhatsApp. ProLoop makes the app the easiest and best-paid way to book that same pro again, and breaks even once leakage falls below 25%.

- 1

Same-pro rebooking

Service-due reminder books the pro you trust in one tap, faster than a WhatsApp.
- 2

Cover you can see

UC's existing warranty shown at every rebook, and void the moment a job goes off-app.
- 3

Tiered repeat commission

25% on job one, 22% then 18% on verified repeats, so staying stops costing the pro.

Kamalish Muthukumar

B.Tech, IIT Madras

Method: 25 customer and 12 partner interviews (planned), UC's public filings (FY25, FY26, Q1 FY27), app teardown, and an illustrative unit-economics model.

READ

UC's ~₹360 per job is the prize both sides can split by going direct. Leakage is a rational trade, not bad behaviour.

UC'S DEFENCE TODAY	WHAT IT DOES	GAP AT THE REBOOK MOMENT
Warranty & damage cover	Protects the job	Never shown when choosing how to rebook
SOPs, training, audits	Consistent quality	Makes the pro good enough to want directly
Assignment by availability	Fast first booking	No way to ask for the same pro
Pro earnings & tools	Keeps pros on-app	Same commission on repeat work
Ratings & reviews	Surfaces the best pros	Tells the customer exactly whom to call directly

Split illustrative: 25% pro commission assumed; fees implied by the 36% take rate.

- HOW A REPEAT JOB LEAKS, STEP BY STEP
- 1

First booking on the app
UC pays to acquire the customer; pro assigned by availability.
- 2

A great job, rated 4-5★
Customer now trusts this person, not the platform.
- 3

Number shared at the door
"Call me next time, I'll come directly."
- 4

The need recurs
AC every 4-6 months, cleaning every 1-3 months.
- 5

Direct call or WhatsApp
One message beats hoping the app sends him again.
- 6

UC earns ₹0 and loses the data
No fee, history, cross-sell or rating.

- LEAK SIGNALS UC CAN ALREADY SEE IN ITS DATA
- **5★ with no repeat:** customers who rated a job 5★, then never rebooked the category within two service cycles.

• **Pro book shrinking:** a pro's active hours stay flat while his share of repeat customers falls.

• **Phone numbers in chat:** support and in-app messages that contain a mobile number before or after a job.

• **Area mismatch:** a pro's on-app jobs cluster far from the pin codes where his past customers live.

• **Seasonal gap:** AC customers who were on-app last summer and are silent this summer.
- FILINGS

UC's own IPO filings list disintermediation as a risk, and point to SOPs, audits and warranties as the defence.
- WHY THIS MATTERS NOW

• **Profit clock.** Listed since Sept 2025 and guided to adjusted EBITDA breakeven by Q3 FY28. Recovered repeat jobs carry no acquisition cost.

• **Cash drain elsewhere.** InstaHelp loses money on every order while growing ~43% a quarter, so the core must carry more margin.

• **Repeat is the base.** 83% of NTV already comes from retained users; protecting it beats buying new ones.

• **The rival is offline.** Online is under 1% of a ₹5.1-5.2 lakh crore market. The real competitor is a phone call.

• **Supply is growing.** Monthly active pros rose from 46.8K to 66.8K, each with a book of loyal customers that can walk.
- THE QUESTION THIS CASE ANSWERS

How might Urban Company make the app the easiest and best-paid way to book the same pro again, without giving up what it earns?
- | SCOPE OF THIS CASE | IN / OUT |
|------------------------------------|------------------|
| AC service and home cleaning | In: highest leak |
| Consumer app + partner app changes | In |
| Pricing of the first job | Out: unchanged |
| InstaHelp, Native products | Out |
| Salon, appliance, pest control | Phase 2 |
| UAE, Singapore, Saudi operations | Out |
- Sources: Entracker; Prabhat (Substack); Finix School
- SO WHAT

UC is built on repeat demand, and its own quality engine makes pros worth calling directly: the leak is structural.

02

About ₹300 Cr of repeat GMV leaks in AC and cleaning alone, and the best pros leak most

₹300 CR BUILD-UP	VALUE	BASIS
FY26 net transaction value	₹4,290 Cr	Reported
Share from retained users	× 83%	Reported
Repeat NTV, all categories	₹3,560 Cr	Derived
AC + cleaning share of repeat NTV	~13%	Assumed; UC does not split
On-app repeat NTV, AC + cleaning	~₹450 Cr	Derived
Share of that demand going off-app	40%*	Customer survey
Leaked GMV = 450 × 40 / 60	≈ ₹300 Cr	Estimate

LEAKED GMV BY LEAKAGE RATE, ₹ CR

READ

Even at half our base-case leak, ₹110 Cr+ a year is at stake.

SERVICE LINE	CYCLE	LOYALTY	OFF-APP*	WHY IT LEAKS
AC service & repair	4-6 mo	High	~45%	Seasonal and predictable; the pro already knows the unit
Home cleaning	1-3 mo	High	~40%	Trust in who enters the home outweighs price
Appliance repair	6-12 mo	Medium	~30%	Number saved from the last visit
Salon at home	3-6 wks	High	~25%	Personal bond; app still used for new services
Pest control	3-6 mo	Low	~15%	Scheduled; any certified pro will do
Plumbing & electrical	Ad hoc	Low	~10%	Urgent; whoever is free fastest wins

!

The customer loses protection

- No warranty, insurance or price guarantee on an off-app job.
- If the repair fails, only the pro himself can be chased.
- Most never knew the cover existed until they needed it.

₹

The partner trades growth for margin

- Saves the ~25% commission on one job, but earns no rating, leads or job cover.
- Drifting off-app slowly shrinks the pipeline that built his book.
- Cash payments leave no income record for loans or insurance.

-

The platform pays twice and earns once

- UC paid to acquire the customer and train the pro, then earns ₹0 on the repeat.
- It loses the service history that powers cross-sell.
- Its best-trained pros become its sharpest competitors.

WHY UC'S DASHBOARDS UNDER-COUNT IT

- Looks like churn:** a leaked customer shows up as 'inactive', not as a job taken by a rival.
- Pro metrics look fine:** active hours stay flat as new customers replace the repeat ones he took direct.
- Quality stays high:** ratings and NPS are strong, because the service really was good.
- Growth hides it:** 33% NTV growth masks a leak concentrated in two categories.
- No one owns it:** it sits between the consumer, partner and pricing teams.

03

Customers leave for ease and pros leave for margin: the research is built to prove or break that

RESEARCH PLAN	WHO	WHY
Customer interviews	25 · Chennai · 2+ UC jobs	Why the next job went, or stayed, on-app
AC service	10	Highest leak, clearest cycle
Home cleaning	10	Trust-driven repeat
Salon at home	5	Control: personal but app-loyal
Partner interviews	12 · hubs and job sites	What going direct pays and costs
AC technicians	5	Seasonal income swings
Cleaning partners	5	Damage risk sits with them
Beauticians	2	Contrast category
App teardown	6 flows	Rebook, rate, warranty, pay
Filings read-through	FY25, FY26, Q1 FY27	Anchor every ₹ figure

- HYPOTHESES TO TEST
- H1** Customers rebook direct mainly for the same pro, not price.
 - H2** Pros go direct mainly to avoid commission on customers they 'own'.
 - H3** Few customers know UC's cover applies to repeat jobs.
 - H4** Leakage rises with pro rating and with predictable cycles.

- INTERVIEW GUIDE: QUESTIONS THAT MATTER
- Customer:** "Walk me through the last time you needed this service again. What did you do first?"
 - Customer:** "What would the app have to do for you to book him there instead?"
 - Customer:** "If the AC broke again a week later, who would you call?"
 - Pro:** "Of your regular customers, how many book you on the app? Why the rest?"
 - Pro:** "What would make a repeat job on the app worth more to you than a direct one?"
 - Pro:** "When a direct job goes wrong, what happens, and who pays?"
 - Both:** "Show me how you would book the same person again in the app today." (observed task)

PR

Priya, 31
Customer · AC service twice a year

"Ravi fixed it right. Why would I gamble on a new person?"

Job to be done: Keep the pro she trusts, with no hassle

Keeps them on-app: One-tap rebook of Ravi

SI

Mr Iyer, 58
Customer · monthly deep cleaning

"Same lady, same work, and cheaper if I call her."

Job to be done: A reliable routine at a fair price

Keeps them on-app: Same-pro schedule + visible cover

RK

Ravi, 34
AC technician · 6 yrs on UC · 4.9★

"They found me the customer once. Why pay them every time after?"

Job to be done: Full calendar and fair pay on loyal customers

Keeps them on-app: Lower fee on repeats + leads

LM

Lakshmi, 29
Cleaning partner · 3 yrs on UC

"Off-app pays more, but if something breaks, I pay for it."

Job to be done: Earn more without carrying the risk

Keeps them on-app: Tiered fee with job cover

JOURNEY STAGE	BOOK FIRST JOB	SERVICE VISIT	RATE & PAY	NEED RECURS	REBOOK	AFTER THE JOB
Customer does	Picks a slot; any pro	Judges the person, not the app	Rates 4-5★ if happy	Remembers the pro by name	Calls the saved number	Pays cash; no record
Pro does	Accepts assigned job	Builds rapport	Offers his number	Waits for the call	Quotes below app price	Keeps 100% of the fee
Leak signal*	—	Number shared: 2 in 3	5★ jobs leak most	No reminder from UC	No 'book Ravi' path	Cover void, unseen
ProLoop fix	—	—	Save-my-pro prompt	Service-due alert	One-tap same-pro rebook	Cover shown, fee tier

- WHAT WE EXPECT TO HEAR*
- Ease wins.** Rebooking on-app is the low point of the journey; direct feels effortless.
 - Risk is hidden.** Direct only looks worse after the job, when something breaks.
 - Pros lead it.** The pro usually offers the number; the customer rarely asks.
 - Price is secondary.** Savings matter, but the same pro matters more.
 - Cover changes minds.** Once shown, damage cover is the strongest reason to stay.
 - Pros want volume.** A full calendar beats a slightly lower fee.
 - Salon is loyal on-app.** Beauticians' clients rebook in-app, the control we expect.
 - Cash is a habit.** Direct jobs are paid in cash, so there is no record either way.

04

Four causes, two product and two pricing: only a fix on both sides beats a phone call

ISSUE TREE: WHY DOES A REPEAT JOB GO OFF-APP?

Repeat job goes off-app

Customer: direct is easier

1 Hard to rebook the same pro
App assigns whoever is free

4 On-app value is invisible
Cover unseen at rebook

Pro: direct pays more

2 Commission on 'owned' work
~25% on a customer he kept

3 Direct looks cheaper
Saved fee split with customer

CAUSE CITED, % OF INTERVIEWS (MULTI-SELECT)*

Same pro hard to rebook

62%

Commission on repeats

48%

Direct looks cheaper

44%

Cover unseen

31%

Ease beats price as the first reason customers give.

Pros cite commission far more than customers cite price.

Cover is a sleeper: low recall, high reassurance once shown.

Causes overlap: most leaked jobs carry two or more.

So: no single lever wins; the fix is a bundle.

CAUSE	LEVER THAT FIXES IT	WHERE IT LIVES	EVIDENCE NEEDED
1 Hard to rebook	Same-pro rebooking + alert	Consumer app	Rebook intent, interviews
2 Commission on repeats	Tiered repeat fee	Partner app, pricing	Pro interviews, pilot
3 Direct looks cheaper	Share of tier passed on	Pricing	Price sensitivity
4 Value invisible	Cover at rebook + checkout	Consumer app, trust	Recall of cover
All Pro offers the number	Pro briefing: why on-app pays	Partner ops	Share of pros offering

OPTION	REACH	IMPACT	CONF.	EFFORT	RICE	VERDICT
Same-pro rebooking + service-due reminder	8	3	80%	3	6.4	Build
Show UC's cover at every rebook	8	1	70%	1	5.6	Build
Tiered repeat commission (25/22/18%)	6	2	60%	2	3.6	Build, gated
Discount coupons on repeat jobs	8	1	30%	1	2.4	Reject
Pro-led subscription plans	4	2	50%	4	1.0	Later
Masked calls; hide phone numbers	7	0.5	40%	2	0.7	Reject
Customer loyalty points	6	0.5	40%	2	0.6	Reject
Penalise pros caught off-app	5	0.5	20%	2	0.25	Reject

Reach: 1-10 relative pairs touched · Impact: 0.5-3 · Effort: person-months · RICE = $R \times I \times C / E$

EXPECTED IMPACT VS EFFORT: AT EVERY EFFORT LEVEL, OUR PICK BEATS THE REJECTS

High

Rebook + alert

Fee tier

Cover shown

Coupons

Points

Masking

Penalise

Pro plans

$y = \text{impact} \times \text{confidence}$

Low

Effort, low → high

Why not coupons?

Pays for jobs that would have come back anyway.

Leakage returns the day coupons stop.

Why not hide numbers?

Pros share numbers in person at the door.

Masking fixes the app, not the relationship.

Why not penalise pros?

Unenforceable off-platform.

Hits top pros first; they move to rivals.

SO WHAT

Rebooking and a visible warranty score highest; the fee tier is the one pricing lever worth its cost.

* hypothesis from planned fieldwork (25 customers, 12 partners)

05

ProLoop makes the app the easiest and best-paid way to book the same pro again

1 Same-pro rebooking Fixes cause 1 · build only • Save my pro: prompt after every 4-5★ job; the pro lands on the home screen. • Service-due alert: fires at the category interval with the pro's next 3 slots. • Fallback: a top-rated pro is offered only if the saved pro declines.	2 Cover you can see Fixes cause 4 · near-zero cost • Existing, not new: UC's rework and damage cover, surfaced at rebook and checkout. • Explicit rule: cover is void for any job arranged off-app. • Proof: past claims shown as 'jobs fixed free'.	3 Tiered repeat commission Fixes causes 2 + 3 · fee cost • Tiers: 25% on job one, 22% on the 1st repeat, 18% from the 2nd onward. • Guarded: only verified pairs: same customer, same address, booked on-app. • Floor: never below 18%; first-job fee never changes.

DESIGN PRINCIPLES		
• Two taps: alert to booked must be as fast as a WhatsApp message. • Show, don't threaten: sell the cover; never warn pros or customers. • Pro opts in: tiers explained in the partner app before they apply.		
SCOPE: V1 IN, V1 OUT		
IN		OUT
• AC + cleaning • Save pro, alerts, rebook • Cover at rebook, checkout • Fee tiers, verified pairs • Partner earnings view		• Salon, other lines • Pro subscriptions • Number masking • New warranty terms • First-job pricing

06

ProLoop breaks even once leakage falls below 25%, as long as the commission cut stays shallow

PER 100 REPEAT JOBS	ON-APP	FEE	UC EARNS
Today · 40% leak	60	25%	₹15,000
Fee cut only · 38% leak	62	20%	₹12,400
ProLoop · 30% leak	70	20%	₹14,000
ProLoop · 25% leak	75	20%	₹15,000
ProLoop · 20% leak	80	20%	₹16,000
ProLoop · 10% leak	90	20%	₹18,000

READ A fee cut alone loses ₹2,600 per 100 jobs; product fixes must come first.

Break-even test

Repeat revenue with ProLoop (on-app jobs × 20%)

Repeat revenue today (60 jobs × 25%) must be ≥ 1

REPEAT FEE	BREAK-EVEN LEAK	VERDICT
24%	below ~38%	Safe, weak pull
22%	below ~32%	Retest option
20%	below 25%	Chosen
18%	below ~17%	Floor
16%	below ~6%	Too deep
15%	never	Loses money

ASSUMPTIONS BEHIND THE MODEL

- ₹1,000 repeat job value; 25% pro commission today, well inside UC's 36% take rate.
- Tier applies only to verified repeat pairs; first jobs stay at 25%.
- Recovered jobs carry no acquisition cost and no extra support cost.
- Fee cut on pairs that never leaked is inside the 'fee cut only' row.
- Leakage is measured as missed repeats against each category's service interval.
- Customer-side fees are excluded here, which makes 25% the conservative break-even.
- Build cost (~₹1 Cr) is small against the pool and is not netted.

UC REPEAT REVENUE VS LEAKAGE, ₹ '000 PER 100 JOBS

READ Where each line crosses 'Today' is its break-even. At 20%, that is 25% leakage.

INCLUDING CUSTOMER FEES, BREAK-EVEN EASES TO ~30%

PER JOB	TODAY	PROLOOP
Commission	₹250	₹200
Customer-side fees (implied)	₹110	₹110
UC take per on-app job	₹360	₹310
Break-even on-app jobs / 100	60	70

- Why it helps:** fees stay the same when a job returns, so each recovered job earns ₹310, not ₹200.
- Why we quote 25%:** it is the conservative, commission-only view used on the resume and in the pilot gate.
- What moves it most:** the size of the tier cut, then the share of repeats that are verified pairs.
- What barely moves it:** build cost, which is under ₹1 Cr against a ₹300 Cr pool.
- Where it breaks:** a 16% tier needs leakage under ~6%, which no pilot should assume.
- Reading:** fees give headroom, not a reason to cut the tier deeper.

RAVI'S MONTH · 16 REPEATS	OFF-APP	PROLOOP
Gross repeat billing	₹16,000	₹16,000
Repeat fee (18% tier)	₹0	– ₹2,900
Priority leads, 4 × ₹750	₹0	+ ₹3,000
Payment	Cash, chased	Weekly payout
Damage & rework risk	Pro pays	UC covers
Rating & ranking	None	Every job
Net take-home	₹16,000 at risk	₹16,100 covered

₹16.1K

net a month on-app

+4

priority leads a month

₹0

damage risk he carries

WHY BOTH SIDES COME OUT AHEAD

- Pro:** same money as direct, plus leads, cover, weekly pay and ranking.
- UC:** product first, fee floor at 18%, first-job fee never cut.
- Upside:** each 5 points of leakage below 25% adds ~₹1,000 per 100 jobs.
- Scale:** at 25% leakage, ~₹110 Cr of the ₹300 Cr returns on-app a year.

WHAT COULD BREAK THE MODEL

- Leads are scarce:** if UC cannot route 4 extra jobs, Ravi nets ~₹13K and may leave.
- Verification leaks:** loose pair rules let pros claim the lower tier on new jobs.
- Price-led customers:** if they only want the saving, the tier must pass more of it on.
- Cover costs rise:** more visible cover means more claims; cap damage per job.
- Seasonality:** AC repeats bunch in April-June, so a winter pilot understates demand.
- Pro churn:** if a saved pro leaves UC, the pair breaks and the customer may follow.
- Rival response:** a competitor matching 18% removes the pricing edge, not the product one.

07

A 4-week, 2-city pilot answers the one question that matters: does leakage fall below 25%?

1 Week 0

baseline, enrol due pairs

2 Week 1

launch in 2 cities

3 Week 2

first rebook read

4 Week 3

partner survey

5 Week 4

pilot closes

6 Week 5

scale / retune / stop

TREATMENT · CHENNAI + PUNE

- ~1,000 customer-pro pairs in AC and cleaning
- Only pairs whose next service is due in weeks 1-3
- Full ProLoop: save pro, alert, cover shown, fee tier
- Randomised by pro: each pro sees one experience

CONTROL · SAME CITIES

- ~1,000 matched pairs: category, pro tier, due date
- Today's flow: next free pro, flat 25% fee
- Same reminder timing, without the saved pro
- Isolates rebooking and fee, not seasonality

WEEK-5 READ

Leak < 25%, revenue/user flat or up

Leak 25-32%

Leak > 32%

Any result

DECISION

Scale to 10 cities

Keep rebook + cover; retest fee at 22%

Stop the fee tier; keep product fixes

Publish the read to partners

METRIC TREE

KILL SWITCH

WHAT THIS PILOT ASSUMES

- Revenue per user down 2 weeks running: the fee tier switches off.
- Rebooking and cover stay live; they cost almost nothing.
- A fraud flag on 'repeat' status pauses that pro's tier.
- The switch is announced to pros upfront, never used quietly.

- Missed repeats vs the service interval are a fair proxy for leakage.
- Enrolling only pairs due in-window makes 4 weeks enough.
- Both arms keep today's lead flow, so leads do not bias the read.
- Chennai and Pune leak close to the national mix; verify first.

GUARDRAIL

MUST HOLD

WHY

Revenue per user

Flat or up

Fee cut must pay back

First-job commission

Unchanged 25%

Protects the core take

Pro earnings per hour

Pros must gain

Rebook decline rate

Below 30%

Else customers call direct

Cancellation rate

Not above control

Same-pro slots may be tight

Customer CSAT

At or above today

Rebooking must feel better

IS THE PILOT BIG ENOUGH?

- ~1,000 pairs per arm detect a ~6-point shift in on-app repeat rate at 80% power.
- Break-even needs 15 points (60 to 75 of every 100 repeats on-app), well above that floor.
- Owner: Growth PM, partner side; readout published in week 5.

LEADING INDICATOR

WEEK 2 TARGET

IF MISSED

Save-pro rate

≥ 40% of 4-5★ jobs

Rework the prompt copy

Alert → rebook

≥ 35% of alerts

Test timing and slot count

Pro acceptance

≥ 80% of requests

Check calendars, raise leads

Tier uptake

≥ 60% of eligible pros

Explain the tier in-app

THE WEEK-5 READOUT WILL ANSWER

- Did it work? on-app repeat rate, treatment vs control, with a confidence interval.
- Why? which input moved: save-pro, alert → rebook, acceptance or tier uptake.
- Who paid? revenue per user and pro earnings per hour against guardrails.
- What next? scale, retune the tier, or stop, using the decision table above.
- What surprised us? one page of qualitative notes from pros and customers.

08

Ship before the 2027 AC season, scale by gate not by calendar, and know what would kill it

Phase 0 · Pilot

Nov-Dec 2026

- Chennai + Pune, AC and cleaning
- ~2,000 customer-pro pairs
- Gate: leakage < 25%, revenue/user flat

Phase 1 · 10 cities

Feb-Jun 2027

- Live before the April-June AC peak
- Fee tiers on verified pairs only
- Gate: on-app repeat rate +10 pts

Phase 2 · All repeat lines

H2 2027

- Salon, appliance and pest control
- Partner app earnings view
- Gate: pro ₹/hour flat or up

Phase 3 · Pro plans

2028

- Annual AC and cleaning plans
- Pro-led, UC-billed
- Gate: plan churn < 20%

RISK	IMPACT	MITIGATION	OWNER	TRIGGER
Fee cut hits jobs that never leaked	Revenue falls with no gain	Tier only for verified repeat pairs	Pricing	Rev/user −3%
Pros game 'repeat' status	Fake repeats at a lower fee	Same address + verified customer	Trust	Anomaly flag
Saved pro is unavailable	Customer calls direct instead	Next 3 slots, then top-rated fallback	Supply	Decline > 30%
Pros talk across arms	Control pros resent flat fee	Announce a time-boxed test upfront	Partner ops	Complaints up
Leakage cannot be seen directly	Pilot reads the wrong number	Missed repeats vs service interval	Analytics	Proxy drift
Competitors copy the fee tier	Advantage narrows	Lead flow + cover are harder to copy than price	Strategy	Rival tier launch

DATA I WOULD ASK UC FOR

- Repeat-pair history: same customer, same pro, by category.
- Category split of NTV and commission by category.
- Rebook intervals and drop-off after a 5★ job.
- Warranty claim rates and cost per claim.
- Cancellations and declines on repeat requests.

WHAT WOULD CHANGE MY ANSWER

- Leakage under 15%: the fee tier is not worth it; ship product only.
- Customers leave on price: tiers must pass more saving to them.
- Cover claims are costly: surface cover, cap the damage limit.
- Pros prefer volume to fee cuts: fund leads, not tiers.
- Rebook already exists in-app: focus on reminders and defaults.

TEAM TO PILOT	ROLE	WEEKS 1-4	WEEKS 5-8	WEEKS 9-10
Product manager	Owns spec, gates, readout	PRD, policy	Build reviews	Launch, read
Engineers × 3	Consumer + partner app	Save pro, alerts	Tier engine, cover	Hardening
Designer	Flows and copy	Prototypes, tests	Final UI	—
Analyst	Instrumentation, power	Event spec	Dashboards	Pilot read
Partner ops	Pro briefings	Tier FAQ	City briefings	Support

OPEN QUESTIONS FOR UC LEADERSHIP

- Pricing:** is a lower repeat commission acceptable while the business works toward EBITDA breakeven by Q3 FY28?
- Policy:** can the cover be made explicitly void for off-app jobs without a pro backlash?
- Supply:** can priority leads be promised to tier pros in peak AC season?
- Ownership:** which team owns on-app repeat rate: consumer growth, partner or pricing?
- Data:** can support chats be scanned for shared phone numbers within privacy rules?

IMPACT AT SCALE, A YEAR

IF LEAKAGE FALLS TO	GMV BACK ON-APP	EXTRA UC TAKE
30%	~₹75 Cr	~₹23 Cr
25%	~₹110 Cr	~₹35 Cr
20%	~₹150 Cr	~₹47 Cr
10%	~₹225 Cr	~₹70 Cr

Leakage Level	GMV Back on-App (Cr)	Extra UC Take (Cr)
30%	75	23
25%	113	35
20%	150	47
10%	225	70

- GMV back = ₹750 Cr AC + cleaning demand × rise in on-app share (60% today).
- Extra take at ~31% (20% repeat commission + fees) on recovered GMV, before the fee cut on pairs that never leaked.
